

# U.S. Cotton Batting

# You and Your Customers Can

# Rest Assured

## The Most Comfortable Filling Material Is Also the Safest

To ensure the fire safety of their product, National Cotton Batting Institute members participate in a third-party certification program developed by Underwriters Laboratories. This program is mandatory for NCBI membership.

Unannounced UL inspections certify cotton batting that meets standards developed by the

**American Society of Testing Materials  
The Upholstered Furniture Action Council  
California Technical Bulletin 117**

Cotton batting that passes these tests also passes the Consumer Product Safety Commission mattress standard (16 CFR 1632).

Now the customer and marketplace can clearly differentiate between certified flame and smolder resistant cotton batting and untreated materials.

By passing UL's extraordinarily high certification standards, National Cotton Batting Institute members are assuring their customers of the safest batting available.
